

Version 30.5(129) changes

- **Edit purchase order item**

This program has been rewritten so that all items in a purchase order will show on the screen and any changes may be made to any or all of the items as a group.

- **Prescription file search**

An option has been added to the Prescription File Search reports that will allow the report to be generated for prescriptions with specific origin codes.

- **PickPoint Will Call System**

An interface has been completed that allows communication between PickPoint's Will Call System and the ProScript pharmacy software.

- **Prescription number barcode**

An option has been added to print a prescription number barcode vertically on the receipt of label #17.
